

you will say

When hearing loss occurs,
understanding spoken language
becomes more difficult.

Speech discrimination tests
measure the ability of the individual
to understand spoken language
using monosyllabic words
(consonant-vowel-consonant)
as the test items.

The phrase **you will say**
begins each sentence in order
to maintain a natural speech pattern.

The ability to understand these words
indicates the level of comprehension
experienced by a person with hearing loss.
